Saga Les Paul Kit
December 12, 2007

Neck mounting Screws.

It appears that the 4 wood screws that hold the neck in place are just a little bit too short - they do not always have much thread protruding to attach the neck.

The solution to the problem is new screws at least 1/8 inch longer to make a safer and more secure project.

We will request these parts from Saga and have them available for anyone who needs them. They have not supplied them as of this date.

We have currently acquired the correct screws from another source and will have them available for the kits we are selling. Our guitar technician is replacing them in all Les Paul Kits Prior to shipping.

We will continue to do this until Saga provides new screws for the kits as standard.
